

Gorilla Doctors 2011 Calendar

Mountain Gorilla Veterinary Project 2010 Annual Report

The Gorilla Doctors

of the Mountain Gorilla Veterinary Project (MGVP) are dedicated to saving mountain gorilla lives. With only about 700 mountain gorillas left in the world today, we believe it is critical to ensure the health and well being of every individual possible. About 380 individuals live in the Virunga Volcanoes Massif, which combines Rwanda's Volcanoes National Park, DR Congo's Virunga National Park, and Uganda's Mgahinga National Park. Another 320 animals live in Bwindi Impenetrable National Park in Uganda. Our international team of veterinarians, the Gorilla Doctors, is the only group providing wild mountain gorillas with direct, hands-on care. Research has proven that by intervening to save sick and injured gorillas, the Gorilla Doctors have helped the overall mountain gorilla population to increase.

Thanks to his management skills and political and business savvy, MGVP's local operations run smoothly.</p>		

One Health

We recognize that the health of the gorillas is inextricably linked to that of the entire ecosystem, so we have established a holistic Mountain Gorilla One Health Program (MGOHP) in partnership with the UC Davis Wildlife Health Center, where both Dr. Kirsten and Dr. Mike are staff veterinarians. The program seeks to further protect gorillas by supporting health programs for people and their animals living and working in and around gorilla habitat. To reduce the risk of disease transmission between people and gorillas, we provide health screenings to conservation workers and have informed government officials about recommended health protocols for tourist visits to the gorillas. We also vaccinate dogs and cats living near gorilla habitat for rabies and support research investigating potential disease transfer among gorillas, humans, domestic animals, and wildlife.

Interventions The Gorilla Doctors regularly monitor the health of gorilla groups to ensure the early detection of disease and injury. When gorillas suffer from human-induced or life-threatening trauma or disease, the Gorilla Doctors stage medical interventions to save their lives. While circumstances vary for each case, generally animals suffering from infectious disease are darted with antibiotics and injured animals are anesthetized and treated in the forest. In 2010, we intervened to help gorillas in all three countries, including darting gorillas suffering from respiratory disease with antibiotics, freeing and treating individuals with limbs caught in poachers' snares, and twice anesthetizing and relocating the silverback Mukunda from villages to his home in Virunga National Park.

Orphans

Sadly, as a result of poaching and the illegal trade of animals, the Gorilla Doctors treat and care for several confiscated gorilla orphans. Last year, Dr. Eddy helped rescue and treat the newest orphan, Djingala, a one-year-old Grauer's gorilla whose family had been killed by poachers. We also continued to provide for the six Grauer's gorillas and two mountain gorillas at our orphan facility in Rwanda, and provided medical care to two mountain gorilla orphans in the DRC. While the Grauer's gorillas will be transferred to a sanctuary in the DRC managed by Dian Fossey Gorilla Fund International, the Gorilla Doctors will be available 24 hours a day for consultation. We will continue to treat the four mountain gorilla orphans, Ndeze, Ndakasi, Maisha, and Kaboko, who will be integrated together at the Senkwekwe Center in Virunga National Park.

Research

To complement our efforts to save mountain gorilla lives in the field, we support research examining gorilla and ecosystem health issues. Samples taken during interventions and necropsies of deceased gorillas are analyzed by our Mountain Gorilla Pathologist Dr. Linda Lowenstine and other researchers to help us better understand gorilla health issues. Such research enabled us to determine a link between a deadly respiratory disease in gorillas and a human pathogen. We also help facilitate student ecosystem health projects, such as a recent study assessing the potential route of transmission of the intestinal parasites *Cryptosporidium* and *Giardia* between domestic cattle, forest buffalo, and mountain gorillas in Volcanoes National Park in Rwanda.

Gorilla Conservation Employee Health Program

As part of our One Health initiative, we offer health screenings and care to gorilla conservation workers and their families. Under the direction of GCEHP Manager Jean-Paul Lukusa, local doctors annually screen veterinarians, researchers, and the national park rangers, trackers, and guides who work in Volcanoes National Park in Rwanda and the gorilla sectors of Virunga and Kahuzi-Biega national parks in DRC. In Uganda the staff of the Bwindi-based Institute of Tropical Forest Conservation are also screened. Doctors give follow up care to sick individuals and glasses to those with vision problems. In addition, the families of employees are offered treatment for intestinal parasites and counseling about hygiene, family planning, and HIV prevention.

Grauer's Gorillas

In addition to looking after the health of mountain gorillas (*Gorilla beringei beringei*), the Gorilla Doctors, at the request of the government of DRC, also monitor the health of their close cousins, the Grauer's (*Gorilla beringei graueri*) or eastern lowland gorillas of eastern DRC. While the estimated population of these lowland-dwelling gorillas is higher than that of the mountain gorillas, the Grauer's gorillas currently face a risk of human-induced injury and death due to the instability of the regions where they live. Despite the danger posed, the Gorilla Doctors perform routine health checks and stage interventions for the habituated Grauer's gorillas of Virunga and Kahuzi-Biega national parks when possible. The doctors also assist in the confiscation and treatment of Grauer's gorillas orphaned by poachers.

Alternative Fuel

To combat deforestation, MGVP has helped establish a local-owned business in Rwanda producing alternative fuel briquettes composed of recycled materials that can be made easily with a wooden press. Charcoal, the primary cooking fuel used by people living around the Virunga Massif, requires the burning of large quantities of wood to produce. Unfortunately, much of the charcoal in the region is made using trees illegally cut in Virunga National Park, DRC. Fuel briquettes were originally championed in the area by the Congolese Wildlife Authority (ICCN), which helped us to bring the technology to Rwanda. In 2010, we worked with our local partners to build a briquette enterprise and begin selling the fuel to NGOs, including MGVP. This year we plan to market briquettes to the community at large as a cheaper alternative to charcoal.

PREDICT

Thanks to a USAID grant awarded to the UC Davis Wildlife Health Center, MGVP is at the forefront of a global campaign to identify the emergence of new infectious diseases in wildlife that could pose a major threat to human health. Gorilla Doctors Julius Nziza and Benard Ssebide, the in-country PREDICT coordinators for Rwanda and Uganda respectively, are leading the field work, collecting blood, saliva, and fecal samples from rodents, primates, bats, and birds in places where these species come into close contact with people. The Gorilla Doctors will also focus on building local laboratory capacity, so that health investigators in Uganda and Rwanda will be equipped to detect infections in wildlife through samples processed in-country.

Wildlife Veterinarians in Africa

We are committed to educating, training, and employing local veterinarians and other professionals. In Africa, the majority of our staff are locals and we offer these employees the chance to improve their skills by sponsoring their attendance at continuing education programs, international conferences, and internships at zoos and clinics in the U.S. We also invite local conservation workers from other organizations to attend lectures and workshops at our regional headquarters and in the field. Each year, several local students studying veterinary medicine or related fields conduct research projects and internships under the guidance of the Gorilla Doctors. Their contributions, especially to our One Health programs, are vital.

Partners

The Gorilla Doctors work in collaboration with the Rwanda Development Board (RDB), Institut Congolais pour la Conservation de la Nature (ICCN), and Uganda Wildlife Authority (UWA), which manage the national parks in the three countries where mountain gorillas survive. We rely on the assistance of national park rangers and authorities to perform health checks, interventions, and research in the field and to coordinate care for the gorilla orphans. Other key partners include the Dian Fossey Gorilla Fund International, International Gorilla Conservation Programme, Institute for Tropical Forest Conservation, Art of Conservation, and Makerere University. With our close partner the University of California Davis Wildlife Health Center we run the One Health Program and we maintain an office and laboratory at The Maryland Zoo.

Dear Friends, YOU are a critical member of the Gorilla Doctors team. As a nonprofit, our work on the front lines of gorilla conservation is not possible without the generous financial support of people like you. Thanks to private donations over the years, we have continued to meet our goal of saving gorilla lives by providing these endangered primates with excellent health care. However, additional funds are essential to continue our veterinary work and to expand our One Health programs. We hope that during this season, you'll consider making a gift to the Gorilla Doctors. You can make a tax-deductible donation on our website, www.gorilladoctors.org, or mail a check using the enclosed envelope.

Sincerely yours, The Gorilla Doctors
